

# MONTHLY REPORT

This Power BI has the simple objective of automating all the KPI's and OKR's that are presented monthly in the management meeting

# TECHNICAL

---

This was one of the hardest, if not the hardest Power BI I've ever done. Integrations with all the company's systems and databases were necessary.

In addition, several DAX metrics and Power Query transformations were required to compile the data, correlate with monthly targets, split results by area and segments, etc.

# RESULTS

---

As a result, today we have a monthly report generated automatically one day after the closing of the month, with direct integration in Power Point.
