# OPERATIONS FULL ANALYSIS

This Power BI was made to answer almost any question related to business data, asked by any manager, leader or analyst.

There are filters on the left side of the dashboard, three bar charts divided into the main KPI's, and above them there is a list where the user can choose the variable used on the X axis of each chart.

TECHNICAL

Technically, it was not a complex report to prepare. It was only necessary to unite the fact table and the dimension tables from the Data Lake.

To filter the X axis choices, it was necessary to generate a table with field parameters

RESULTS

A self-service dashboard for managers, leaders or analysts, with unlimited possibilities of parameter combinations
